Google's Les Paul guitar doodle may have cost \$268 million in lost productivity

Updated: Mar. 22, 2019, 9:56 p.m. | Published: Jun. 17, 2011, 5:56 p.m.

By [Geoff Herbert](#) | gherbert@syracuse.com

Google The June 9

Google Doodle honored guitar innovator Les Paul's 96th birthday.

Last week, Google's homepage featured an [interactive guitar](#) honoring Les Paul. It played 10 notes, starting with a low G and climbing up to a high B. Users could literally play the guitar by dragging their mouse over the image's strings or use the keyboard to play each note.

Facebook stirred up controversy because one of its data science researchers published the results of **an experiment on 689,003 users to see if showing them more positive or negative sentiment posts in the News Feed would affect their happiness levels** as deduced by what they posted.

The impact of this experiment on manipulating emotions was tiny, but it raises the question of where to draw the line on what's ethical with A/B testing.

The Morality Of A/B Testing

ACM Code of Ethics and Professional Conduct

Affirming our obligation to use our skills to benefit society

Association for Computing Machinery

- General Ethical Principles
- Professional Responsibilities
- Professional Leadership Principles
- Compliance with the Code
- Case Studies
- Using the Code

ACM CODE OF ETHICS AND PROFESSIONAL CONDUCT

1 | General Ethical Principles

A computing professional should...

1.1 Contribute to society and to human well-being, acknowledging that all people are stakeholders in computing.

This principle, which concerns the quality of life of all people, affirms an obligation of computing professionals, both individually and collectively, to use their skills for the benefit of society, its members, and the environment surrounding them. This obligation includes promoting fundamental human rights and protecting each individual's right to autonomy. An essential aim of computing professionals is to minimize negative consequences of computing, including threats to health, safety, personal security, and privacy. When the interests of multiple groups conflict, the needs of those less advantaged should be given increased attention and priority.

Computing professionals should consider whether the results of their efforts will respect diversity, will be used in socially responsible ways, will meet social needs, and will be broadly accessible. They are encouraged to actively contribute to society by engaging in pro bono or volunteer work that benefits the public good.

In addition to a safe social environment, human well-being requires a safe natural environment. Therefore, computing professionals should promote environmental sustainability both locally and globally.

1.2 Avoid harm.

In this document, "harm" means negative consequences, especially when those consequences are significant and unjust. Examples of harm include unjustified physical or mental injury, unjustified destruction or disclosure of information, and unjustified damage to property, reputation, and the environment. This list is not exhaustive.

Well-intended actions, including those that accomplish assigned duties, may lead to harm. When that harm is unintended, those responsible are obliged to undo or mitigate the harm as much as possible. Avoiding harm begins with careful consideration of potential impacts on all those affected by decisions. When harm is an intentional part of the system, those responsible are obligated to ensure that the harm is ethically justified. In either case, ensure that all harm is minimized.

To minimize the possibility of indirectly or unintentionally harming others, computing professionals should follow generally accepted best practices unless there is a compelling ethical reason to do otherwise. Additionally, the consequences of data aggregation and emergent properties of systems should be carefully analyzed. Those involved with pervasive or infrastructure systems should also consider Principle 3.7.

ACM CODE OF ETHICS AND PROFESSIONAL CONDUCT

1.3 Be honest and trustworthy.

Honesty is an essential component of trustworthiness. A computing professional should be transparent and provide full disclosure of all pertinent system capabilities, limitations, and potential problems to the appropriate parties. Making deliberately false or misleading claims, fabricating or falsifying data, offering or accepting bribes, and other dishonest conduct are violations of the Code.

Computing professionals should be honest about their qualifications, and about any limitations in their competence to complete a task. Computing professionals should be forthright about any circumstances that might lead to either real or perceived conflicts of interest or otherwise tend to undermine the independence of their judgment. Furthermore, commitments should be honored.

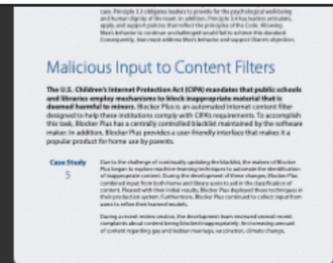

Computing professionals should not misrepresent an organization's policies or procedures, and should not speak on behalf of an organization unless authorized to do so.

1.4 Be fair and take action not to discriminate.

The values of equality, tolerance, respect for others, and justice govern this principle. Fairness requires that even careful decision processes provide some avenue for redress of grievances.

Computing professionals should foster fair participation of all people, including those of underrepresented groups. Prejudicial discrimination on the basis of age, color, disability, ethnicity, family status, gender identity, labor union membership, military status, nationality, race, religion or belief, sex, sexual orientation, or any other inappropriate factor is an explicit violation of the Code. Harassment, including sexual harassment, bullying, and other abuses of power and authority, is a form of discrimination that, amongst other harms, limits fair access to the virtual and physical spaces where such harassment takes place.

The use of information and technology may cause new, or enhance existing, inequities. Technologies and practices should be as inclusive and accessible as possible and computing professionals should take action to avoid creating systems or technologies that disenfranchise or oppress people. Failure to design for inclusiveness and accessibility may constitute unfair discrimination.

Code of Ethics funktionieren nicht. (McNamara et al.)

Methodology: Controlled Experiment

- 105 professionelle und 63 studentische Teilnehmer
- Der Hälfte der Teilnehmer wird das ACM CoE gezeigt, der anderen Hälfte wird gesagt, „dass das Rückgrat der Unternehmenskultur starke ethische Standards sind“.
- 11 nicht offensichtliche ethische Fragen von StackOverflow, die Werte berühren, zB Probleme mit geistigem Eigentum, Ehrlichkeit, ...

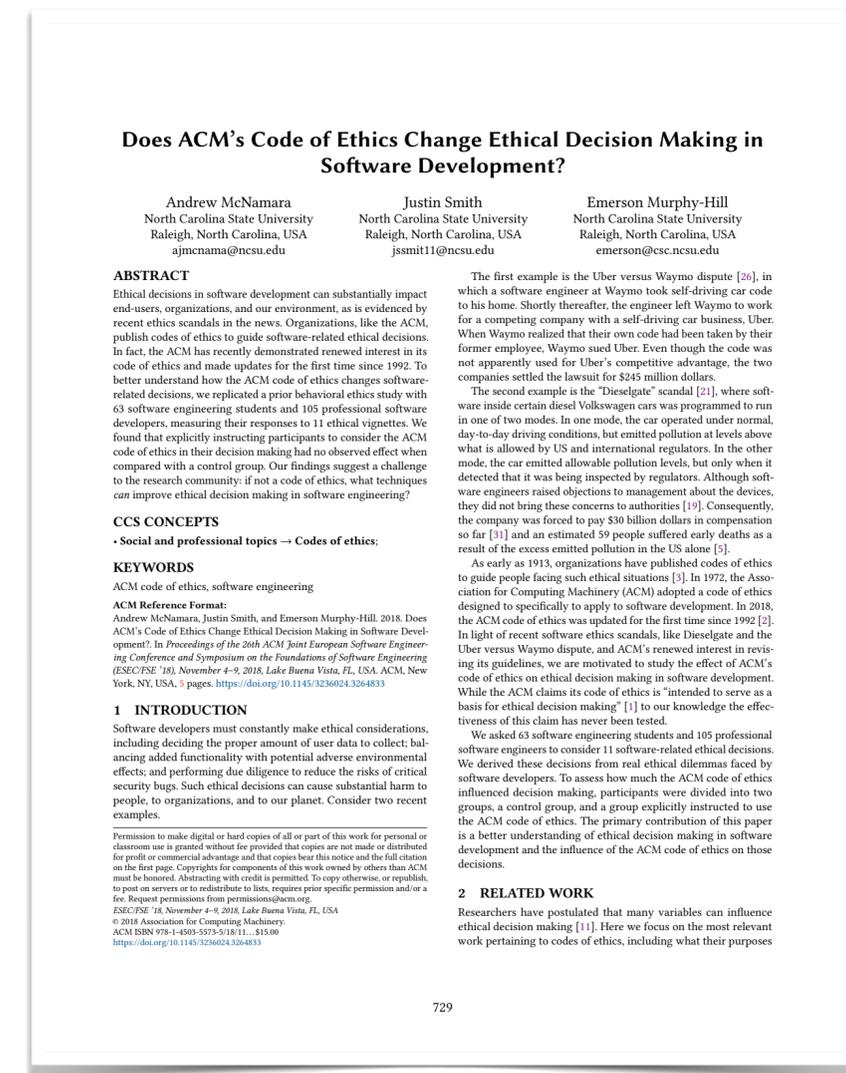

Forschungsfrage: Beeinflusst das Vorhandensein eines Ethikkodex softwarebezogene ethische Entscheidungen?

- "No statistically significant difference in the responses for any vignette were found across individuals who did and did not see the code of ethics, either for students or for professionals."

A deadline is quickly approaching for a project that you are working on. You realize that you will not be able to meet the deadline if you only work during normal hours. You are not allowed to take your computer out of the office. What do you do?

- Download the data on a personal hard drive so you can continue development at home
- Unsure
- Stay at work longer in order to continue development

IEEE Standard Model Process for Addressing Ethical Concerns during System Design

IEEE Computer Society

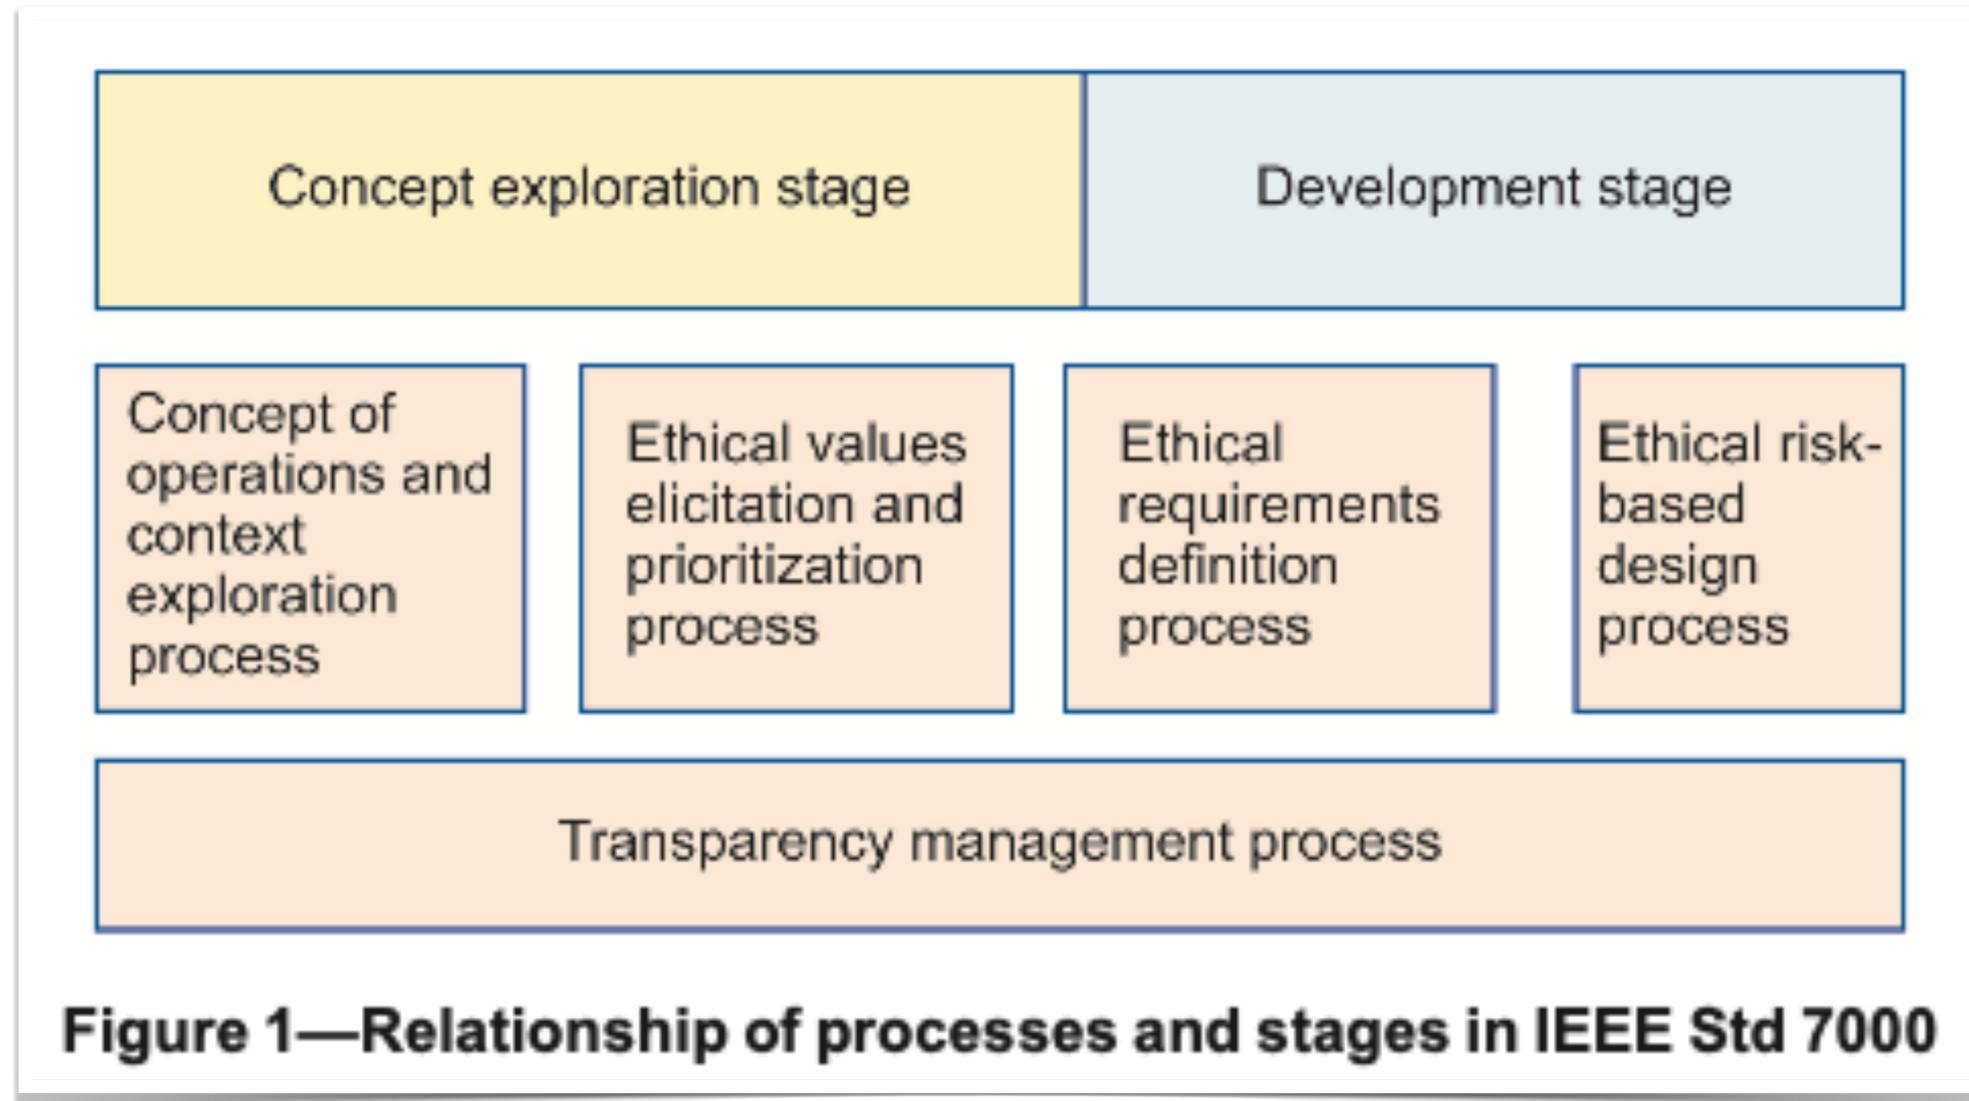

Developed by the
Systems and Software Engineering Standards Committee

IEEE Std 7000™-2021

- Seit dem 15.09.2021 gibt es eine neue Norm!
- Prozessorientierter Engineering Ansatz mit starkem RE Fokus
- 154 Experten involviert, 34 Workgroup Mitglieder
- 79 Seiten

Abstract: A set of processes by which organizations can include consideration of ethical values throughout the stages of concept exploration and development is established by this standard. Management and engineering in transparent communication with selected stakeholders for ethical values elicitation and prioritization is supported by this standard, involving traceability of ethical values through an operational concept, value propositions, and value dispositions in the system design. Processes that provide for traceability of ethical values in the concept of operations, ethical requirements, and ethical risk-based design are described in the standard. All sizes and types of organizations using their own life cycle models are relevant to this standard.

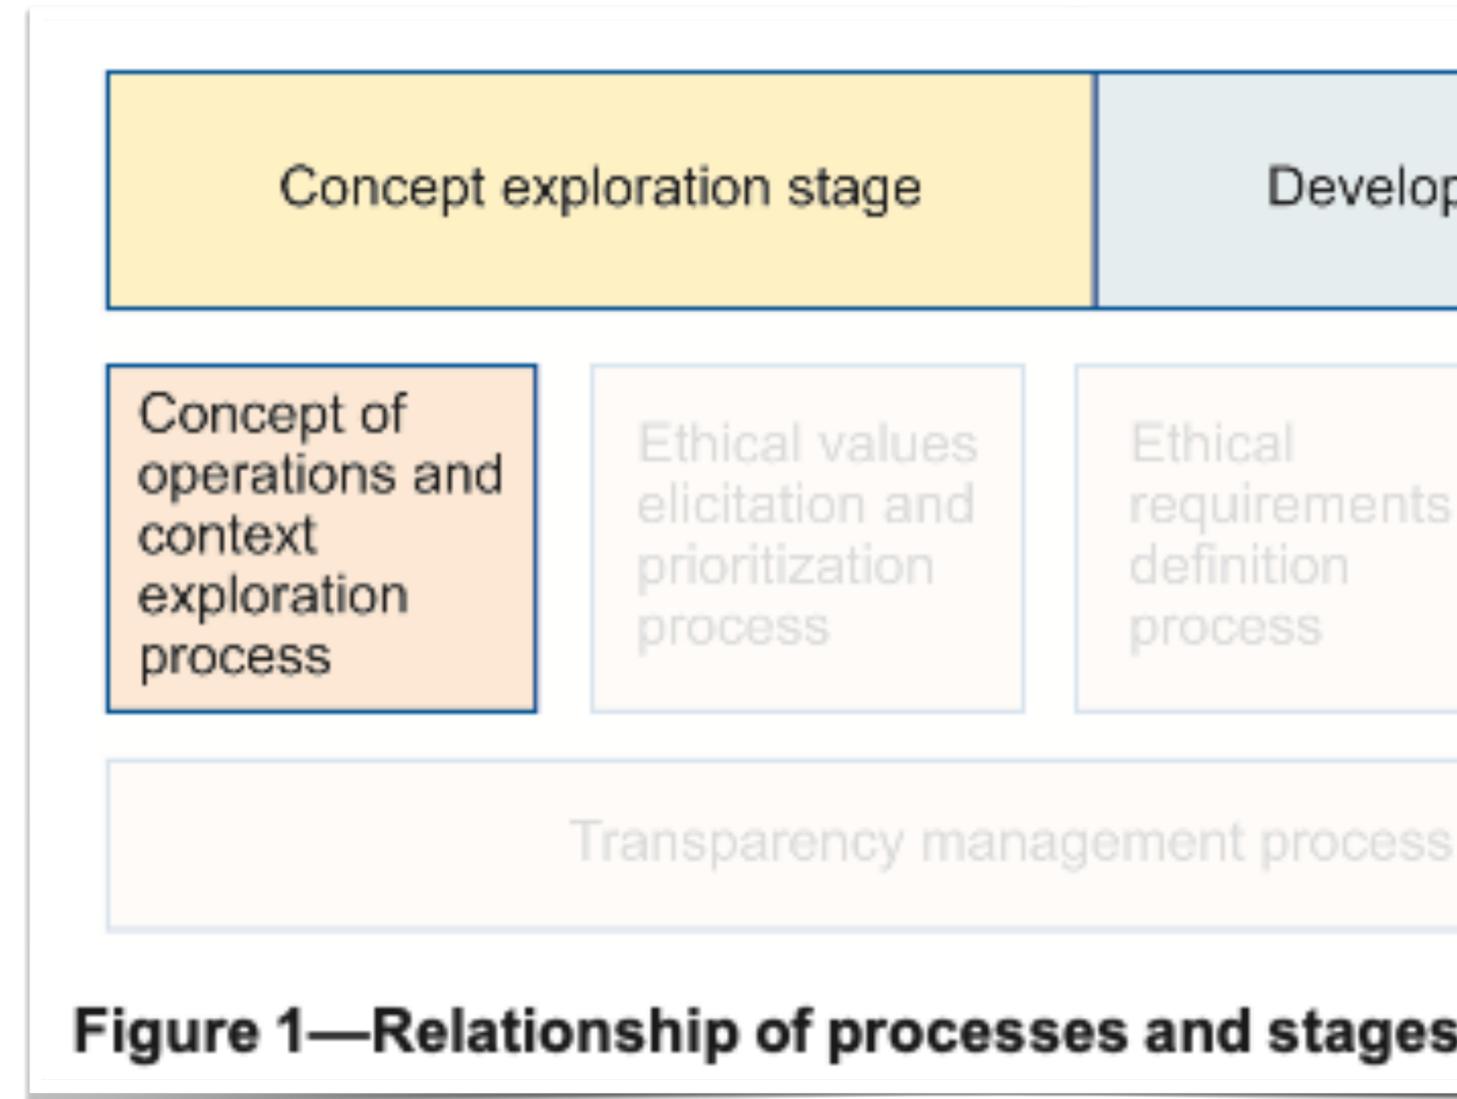

IEEE 7000:2021 Process

IEEE 7000:2021 Process

Outputs:

- a) Context description
- b) Lists of stakeholders to be consulted and direct and indirect stakeholders affected by the ConOps
- c) Refined SOI concept of operation
- d) Outcomes of feasibility studies

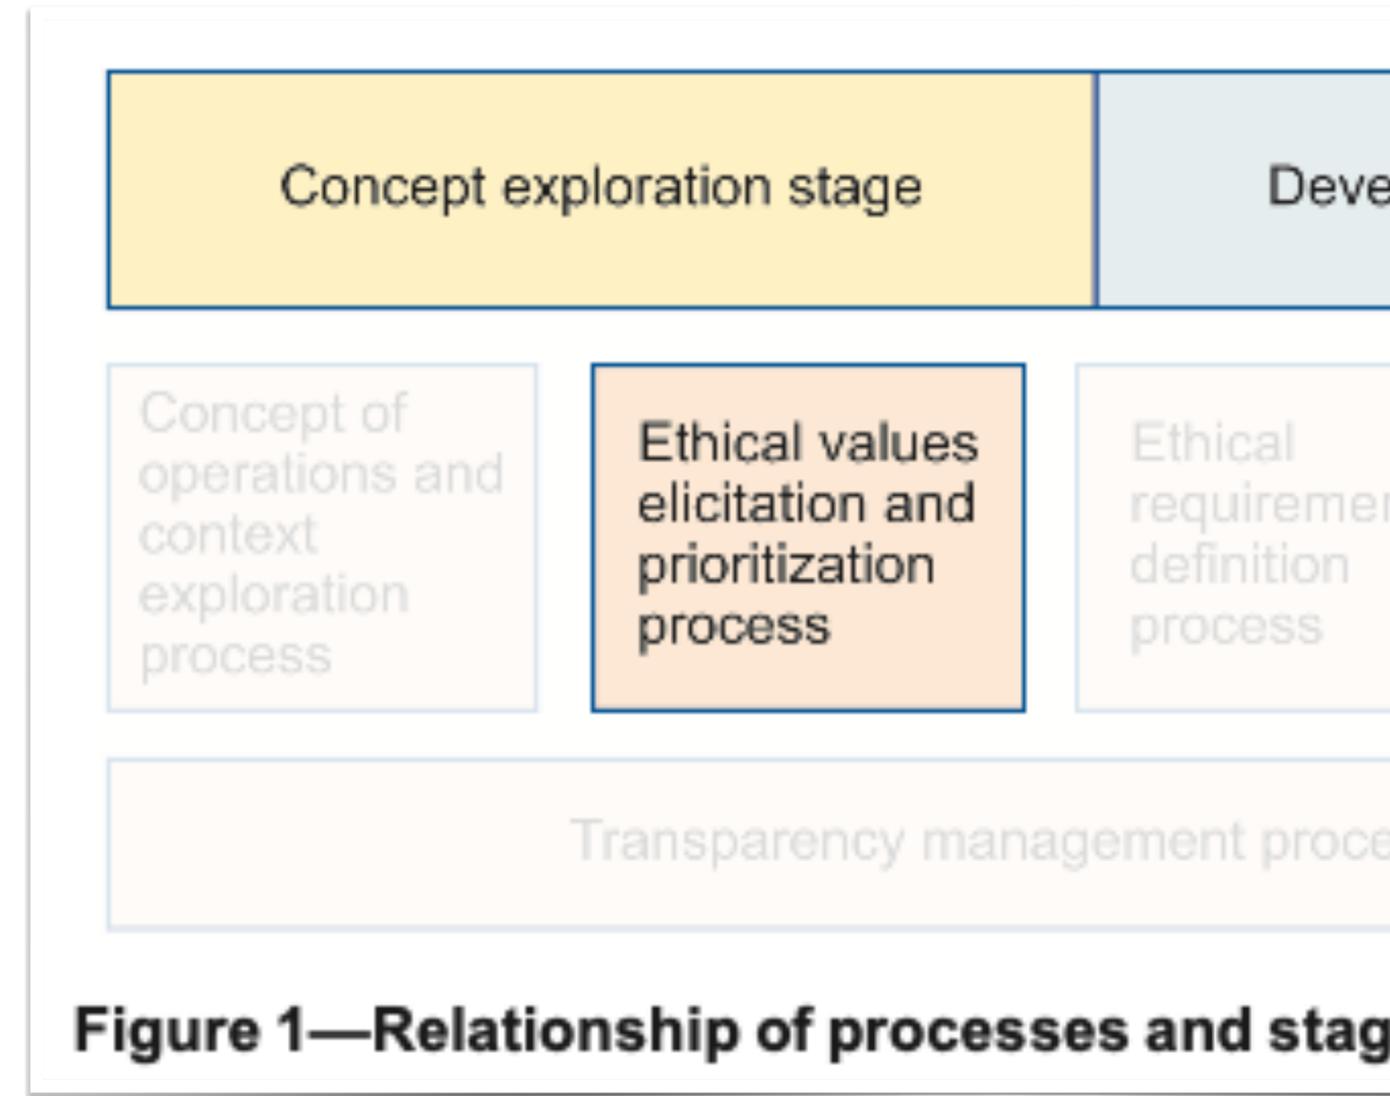

**Table D.1—Legal, social, and environmental feasibility study and analysis guidelines
(continued)**

Analysis topic	Legal	Social	Environmental
Question 1	Who are the leaders, managers, consultants, individuals, or groups, legally accountable and responsible for the design milestones across the concept exploration and development stages? Record the full chain of command in the design custody.	What different kinds of demographics, geographies and cultures are impacted by the SOI as designed?	What is the project/SOI's approach to compliance with international environmental standards such as ISO 26000 [B28] and ISO 14001 [B27]?
Question 2	What local, regional, national, and international regulatory bodies should be consulted or enhanced to evaluate a full 360 view of the SOI's legal responsibilities to its stakeholders, users, society, and international policy?	Are any special interest groups or stakeholders differentially impacted by the SOI's design? If so, how are these to be identified and addressed?	What is the scope and scale of the environmental impact?
Question 3	Are any special interest groups or stakeholder legal rights differentially impacted by the SOI's design? If so, how are these to be identified and addressed?	Are there significant social, economic, political, or cultural issues among the stakeholders and users and their geographies/ cultures that should be analyzed using the precautionary principle? If so, they should be described in writing as a social feasibility baseline report.	How is the Precautionary Principle being applied? Describe how risks and threats are being identified and mitigated.
Question 4	What legislation relates to the granting of ownership/ control of the SOI design, data, use, storage and final disposition?	How can the SOI design be adapted to be more socially and culturally relevant for stakeholders and users?	What actions and policies are being taken for the SOI's use of rare earth materials, avoidance of contamination, recycling of waste materials, protection of habitats and wildlife?

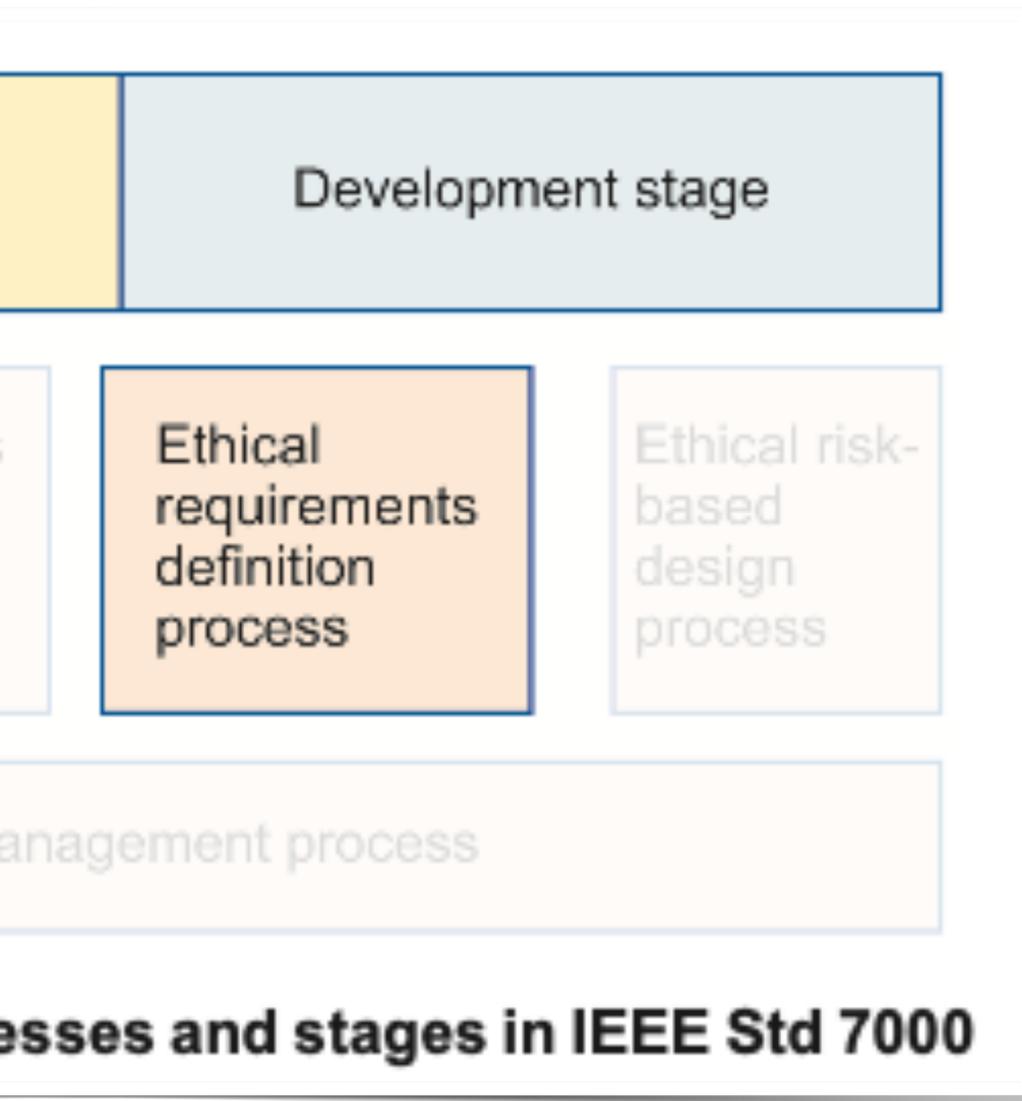

IEEE 7000:2021 Process

Outputs:

- a) Value Register or case for ethics
- b) List of potential technical and organizational risks

IEEE 7000:2021 Process

Outputs:

- a) Ethical Value Requirements (EVRs) and value-based systems/software requirements
- b) Potential technical and organizational risks and opportunities for the EVR

IEEE 7000:2021 Process

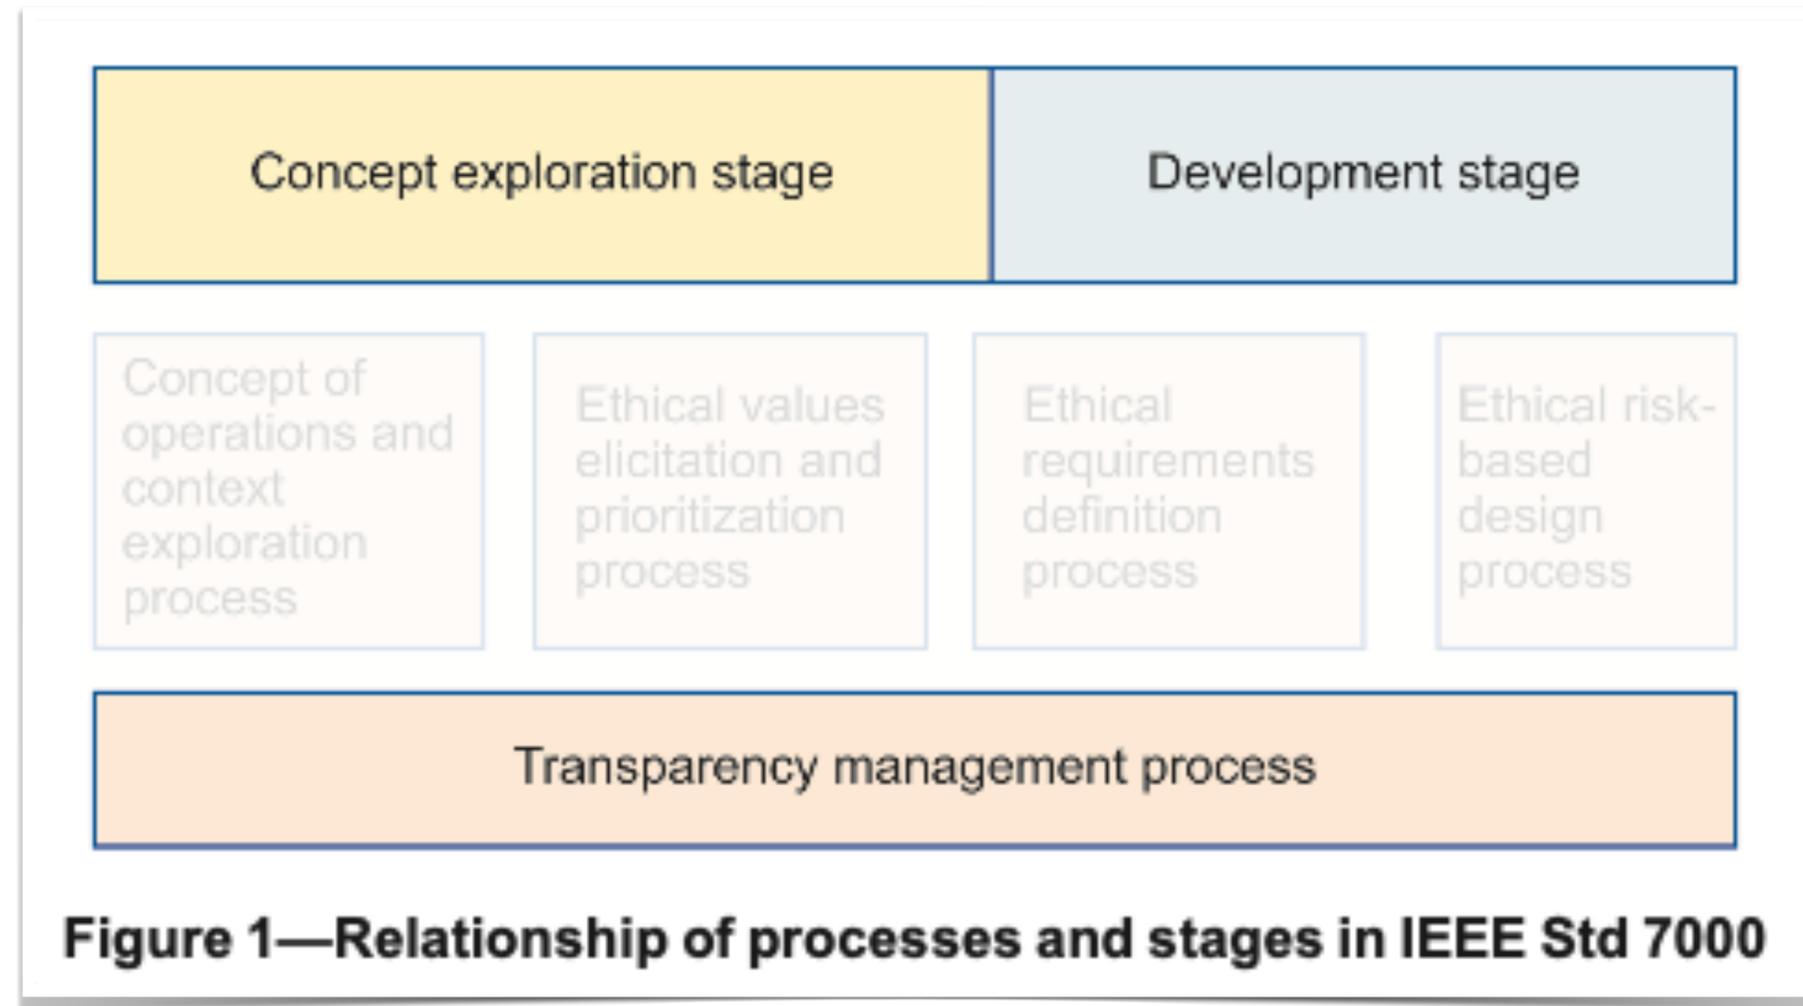

Outputs:

- a) An ethically aligned design for the SOI
- b) A refined concept of operation and operational concept
- c) An updated Value Register
- d) An updated Case for Ethics

IEEE 7000:2021 Process

OutCOMES:

- a) Sufficient appropriate information about the ethical aspects of the SOI is made available during system development and afterward.
- b) Stakeholder and project communications reflect principles of transparency, accountability, and explainability.
